

Software Engineering Intern — Livo AI

Location: Bangalore (in-person) **Duration:** April to June 2026 **Stipend:** Rs. 30,000/month + Claude Max subscription **Joining:** Immediate joiners preferred

What we do

Livo AI builds AI products and automation systems for businesses: CA firms, insurance companies, pharma clients, nonprofits, enterprises. Every project ships to a real client with a real deadline. There are no toy projects here.

Website: livoassistant.com

Founded by: [Soumya Sharma](#) and [Kangana Pandiya](#) (IIM Ahmedabad, ex-McKinsey)

What you will work on

You will be embedded directly in ongoing client projects. Depending on what is in flight when you join, your work could include:

- **Enterprise portals** — full-stack web apps (FastAPI + React/JS) for compliance, billing, payroll, and reporting workflows
- **Document intelligence pipelines** — OCR, extraction, and classification systems that process invoices, TP reports, audit docs, and regulatory filings using AWS Bedrock and Claude
- **Enterprise search** — agentic search over large document collections (PDFs, DOCX, Excel), combining vector search, keyword search, and knowledge graph traversal
- **Geospatial analysis** — agentic loops that analyse satellite and drone imagery for infrastructure monitoring, using Python and vision-language models
- **Knowledge graph systems** — ingesting organisational data into Neo4j using Graphiti, building entity extraction and relationship classification pipelines
- **Dataset work** — building evaluation sets, labelling outputs, running structured tests against LLM pipelines

Most projects involve a mix of engineering, AI model integration, prompting, and data work.

Stack

Languages & frameworks: Python, FastAPI, React, JS

Data & storage: PostgreSQL/Supabase, Vector DB, Neo4j, AWS

AI & models: Bedrock, Graphiti, Claude Code

You do not need to know all of these. What matters more is that you pick things up fast and can work without hand-holding.

Who we are looking for

No specific degree or year of study required. What we care about:

- You use AI tools (Claude Code, Codex) as a real part of how you work, not just for autocomplete

- You have some feel for prompting and know how to get reliable outputs from LLMs

It is a bonus if you have worked with agentic systems, LLM APIs, RAG pipelines, knowledge graphs, or document processing before.

What you get

- Real client work from day one
- Rs. 30,000/month stipend
- Claude Max subscription (the tool we use for everything)
- Direct mentorship from the founders
- Full exposure to the AI product lifecycle: scoping, building, deploying, and getting client feedback
